What You Are Not Being Told (This is Just the “Tip of the Iceberg”)

Introduction

I created this brief document to provide some resources that will hopefully allow people to see the greater agenda that is (and has been) afoot for quite some time now. As the title suggests, the information here is only the “tip of the iceberg”. There is a whole lot more that is going on in the shadows.

This information is not fully discussed (or discussed at all) by the “corporament”.

In the USA, the “corporament” exists as the:

military (defense/offense) + industrial + academic (schooling — at all levels — as prison) + “corporament” entertainment (Hollywood, media, advertising/consumerism/commercialization, propaganda/psychological warfare) + judicial (defense and prosecutorial lawyers, judges, law enforcement/police, prisons) + financial (banks, accounting firms) + religion + petrochemical/pharmaceutical (drugs, antibiotics, antibacterials, vaccines, pesticides — toxins to kill or put you at “dis-ease” and drugs to “treat” you) + imperial commu-soci-capitofasdemorepubcracism system/society/economy/Western thinking = Military-industrial-academic-“corporament” entertainment-judicial-financial-religion-petrochemical/pharmaceutical complex.

Commu-soci-capitofasdemorepubcracism is derived from communism, socialism, capitalism, fascism, democracy, and republic as these concepts all have the same root. The complex was originally defined in the aforementioned article [https://www.utdailybeacon.com/opinion/our-government-can-not-be-trusted/article_81932d59-0861-5647-87b2-901d4d5cabd8.html] | Our government can not be trusted by Irucka Ajani Embry, Monday, 26 August 2002, *The Daily Beacon*. Also, the article can be found by searching at <https://www.questionuniverse.com/oldway/columns.html>], but it has been recently revised to reflect a new understanding of the complex’s nature.

—Irucka Ajani Embry, piece entitled: “Attack of the ...”, pages 103-104, from *Balancing the Rift: ReCONNECTualizing the Pasenture*, ISBN-13: 978-0-9914994-0-3 / ISBN-10: 0-9914994-0-9

Also, I am enclosing resources that will enable us, globally, to unite together as Human Beings, the Human Race, and regain our freedom & power from the global *elites* that think that they control us because we have allowed them to develop that false conclusion.

It’s past time for the Human Race To Get Off Our Knees [see *Human Race Get Off Your Knees: The Lion Sleeps No More* By David Icke — <https://shop.davidicke.com>]

We are All Infinite Love/Infinite Consciousness having an Experience as ... [see *Remember Who You Are: Remember ‘Where’ You Are and Where You ‘Come’ from: Remember ...* By David Icke — <https://shop.davidicke.com>]

Thank you.

“In the century following Paracelsus’ death, the magnetic tradition was carried on by Robert Fludd, a physician and a mystic. Fludd was considered to be one of the most prominent alchemical theorists of the early seventeenth century. He emphasized *the role of the sun in health as a source of light and life. The sun was considered the purveyor of life beams required for all living creatures on earth.* Fludd felt that this supercelestial and invisible force in some way manifested in all living things and that *it entered the body through*

the breath. One is reminded of the Indian concept of *prana*, the subtle energy within sunlight which is assimilated through the process of breathing. Many esotericists feel that by mentally directing the visualized stream of prana, healers may focus this etheric energy through their hands and into the patient. Fludd also believed that the human being possessed the qualities of a magnet.”

–Richard Gerber, M.D., *Vibrational Medicine: The #1 Handbook of Subtle-Energy Therapies*, Third Edition, page 287, Bear & Company, 2001, ISBN# 978-1-879181-58-8

“The human body is an energy complex that generates all forms of familiar energies—electric, magnetic, thermal, kinetic and electromagnetic—which can easily be detected by simple devices of which the most sophisticated is the electroencephalograph. But there are also other types of subtle energies that have not yet been defined and which can relate primarily to the mental, emotional and instinctual levels of the human being.”

–*A New Model for Health and Disease: Suggesting an Explanation for the Explosion of: AIDS, Cancer, Asthma, Candida, Epilepsy, Alzheimer’s, Tuberculosis, Schizophrenia, Multiple Sclerosis, Allergic Conditions, Rheumatoid Arthritis, Chronic Fatigue Syndrome* New Expanded Edition By George Vithoulkas, North Sporades, Greece: International Academy of Classical Homeopathy, 2008, Page 42, ISBN# 1-55643-087-6 [<https://www.vithoulkas.com/>]

“Interestingly, this idea resembles the dynamic model of biological systems based on chaos theory. In this model, input signals are processed by interactions among the partial systems, and when the parameters of the partial systems are changed, the output signal changes from steady state to period two, four, or chaos. In the TCM [Traditional Chinese Medicine] model, the exogenous factors are processed by interactions between the five *zang*-organs, resulting in various symptoms. If we assume the five *zang*-organs are the partial systems in the mathematical models of biological systems based on chaos theory, the TCM model is quite similar to the biological model. This implies that TCM attaches greater importance to function than to structure (i.e., anatomy) and regards the **human body as a dynamic system**.” [my emphasis]

–Concept of Mind and Brain in Traditional Chinese Medicine By Kaoru Sakatani, *Data Science Journal*, Volume 6, Supplement, 7 April 2007 [<https://fractal.org/Life-Science-Technology/Chinese-fractal.pdf>]

“There are so many unseen negative influences on human health that are missed by conventional medical practitioners that many sources of human suffering remain undetected. It is recognized that sulfur dioxide and carbon monoxide are airborne pollutants which are harmful to human health. These chemicals place abnormal stresses on the body’s physiology and lead to the manifestation of illness in certain susceptible individuals. *Disease susceptibility as a consequence of exposure to environmental pollutants is partly a function of the strength of the body’s immunologic, physiologic, and energetic defense mechanisms*.

“The production of environmental illness is not strictly related to exposure to levels of harmful substances that are higher than FDA safety limits. *Conventional safety limits of exposure do not take into account the subtle vibrational effects of toxic substances*. Because of their inability to comprehend vibrational levels of toxicity, the orthodox scientific community is more lenient in defining safe levels of exposure to many harmful substances. The inadequacy of conventional scientific testing to measure subtle negative disturbances to human physiology also limits the FDA’s ability to define exactly which substances are really harmful to human beings, let alone the concentration necessary for toxic effects.”

–Richard Gerber, M.D., *Vibrational Medicine: The #1 Handbook of Subtle-Energy Therapies*, Third Edition, page 451, Bear & Company, 2001, ISBN# 978-1-879181-58-8

Immunity: Does It Actually Exist?

Béchamp, Antoine, The Blood and its Third Element [1912]

Questioning the “Germs” Cause “Dis-ease” Paradigm

- 1) If the natural role of germs (evolved microzymas due to the ambient conditions in our internal environment) in our bodies is to carry away waste products, dead cells, etc., then why are we surprised to see germs in our body doing those functions? Is it that we have failed to realize that the presence of germs does not mean the presence of “dis-ease”? Please remember that “correlation does not equal causation”. Also, is it that we do not realize that we are germs?
- 2) If you believe in the fraudulent “germ theory of disease causation”, then why haven’t all of the germs collectively defeated their enemy (Human Beings & every other Life form on this planet)? Why is that we have co-existed for billions of years?
- 3) Why don’t germs always attack their prey (host), i.e., why are we not always sick from an “infection” caused by “germs”?
- 4) In a single dwelling, how is it that not everyone living together in close-quarters gets sick at the same time or for the same length of time? Furthermore, why isn’t everyone’s complete symptoms the exact same? Furthermore, how can a person be exposed to the same so-called “infectious agent” & not have the same symptoms each time? And how can such a person not have symptoms each time after the same exposure?
- 5) Is it possible that people have similar symptoms (“an outbreak”) because they are sharing a “resonance pattern” within our Collective Human Consciousness? We already know that our Collective Human Consciousness Field can affect “physical” phenomena as happened on 11 September 2001 with the RNGs (random number generators). Could it be the same for the “physical” manifestation of symptoms too? [1], [2]
- 6) Has anyone actually proved that “germs” cause disease thus confirming all of Friedrich Gustav Jacob Henle-Robert Koch’s Postulates as well as Thomas M. River’s Postulates? Has this been reproduced? [3]
- 7) Has anyone actually proved that the “SARS-CoV-2 virus” (“coronavirus”) causes the “dis-ease” named “COVID-19” thus confirming all of Friedrich Gustav Jacob Henle-Robert Koch’s Postulates as well as Thomas M. River’s Postulates? Has this been reproduced? If not, then why not? And if not, then why has the world been so drastically changed? [4]
- 8) Has any “health” authority in the world been successful at isolating the “SARS-CoV-2 virus” (“coronavirus”) from “patient-zero” in Wuhan, China? If not, then why not? [5]
- 9) Has any “health” authority in the world been successful at isolating the so-called “delta variant” “SARS-CoV-2 virus” (“coronavirus”) from “patient-zero”? If not, then why not?
- 10) Has any “health” authority in the world been successful at isolating the so-called “lambda variant” “SARS-CoV-2 virus” (“coronavirus”) from “patient-zero”? If not, then why not?
- 11) If the SARS-CoV-2 “virus” has yet to be properly isolated, how can a “delta variant” of a non-existent “virus” be properly isolated, purified, and identified to be the cause of new dis-eases more than likely caused, in part, by the global, mass vaccination campaign\$?
- 12) If the SARS-CoV-2 “virus” has yet to be properly isolated, how can a “lambda variant” of a non-existent “virus” be properly isolated, purified, and identified to be the cause of new dis-eases more than likely caused, in part, by the global, mass vaccination campaign\$?
- 13) How is it that 6 feet (1.83 meters) of personal distance will prevent a possible “infection” from a “virus” that somehow started in Wuhan, China, and has basically travelled to most countries of Planet Earth in a matter of mere months?
- 14) How is it that this “virus” can navigate the world, but can’t go above, under, around, and/or through the {micro-and/or nano-] pores of a plexiglass and/or plastic “barrier” Or gloves?

- 15) Has anyone applied all aspects of the Scientific Method to prove that the “germ theory of disease causation” is indeed valid? Has this been reproduced successfully? [6]
- 16) Does a cough, snuffle, sneeze, sore throat, etc. mean that you have been “infected” by an external germ? Or does it mean that your body is attempting to bring itself back into homeostasis?
- 17) If you believe in the fraudulent “germ theory of disease causation”, then how is that a homeopathic remedy, including a homeopathic cell salt can cure a “dis-ease” [remove the collection of symptom(s) that we falsely call “dis-ease” names] like “pneumonia”, “cold”, “influenza (flu)”, etc.?
- 18) Is there really an “immune” system? Is there really “immunity”? Is there really “herd immunity”? If not, then why are these lies repeated?
- 19) In the United States of America, has any attorney filed a Qui Tam against the NIH, CDC, FDA, NIAID, etc. for science fraud under the Data Quality Act (DQA) {Like Dr. Judy Wood did against the NIST’s NCSTAR contractors concerning their fraudulent continuum of violence 11 September 2001 report.}? [7]
- 20) If you believe in the fraudulent “germ theory of disease causation”, then how do you account for pleomorphism? [Please refer to the **Germes (including the “Coronavirus”) Are Not the Cause of Disease & Life Forms Can Transform Themselves Into Other Life Forms (Pleomorphism)** section.]
- 21) Why would you give an antiSelf poison (Antibacterial/Antibiotic/Antimicrobial/Antiviral) in order to remove a dis-ease? Is it that we do not know that that will create a new “dis-ease” to be treated?
- 22) Please note that on 2 November 2020, the United States Centers for Disease Control and Prevention (CDC) [<https://www.fluoridefreepeel.ca/wp-content/uploads/2020/11/USA-CDC-Virus-Isolation-Response-Scrubbed.pdf>] stated that **“A search of our records failed to reveal any documents pertaining to your request.”** in response to a FOIA request for records concerning the isolation of the same “SARS-CoV-2 virus”. If the US CDC does not have any records of isolating the “SARS-CoV-2 virus” (“coronavirus”), how did it determine that that “virus” is the cause of “COVID-19”? How did the CDC rule out other possibilities?
- 23) If you believe in the fraudulent “germ theory of disease causation”, then have you ruled out all other possibilities for any “dis-ease” that you or anyone that you know have had, including, but not limited to, the following:
 - present and/or past trauma (intergenerational or trans-generational and/or personal); [8]
 - your toxic emotions/thoughts;
 - poor posture;
 - poor breathing;
 - poor personal hygiene;
 - poor environmental hygiene (too dirty or too clean/disinfected);
 - lack of adequate exercise for you;
 - lack of adequate rest for you;
 - lack of adequate exposure to Sunlight {Universal In-FORM-ation} {thank you David Icke} for you;
 - wearing of a face shield, face mask, etc.;
 - dehydration;
 - constipation;
 - diarrhea;
 - “working habits”; [9]

- “economic status”; [10]
 - negative stress (not limited to financial lack); [11]
 - nutritional lack (malnourishment, malnutrition, poor absorption, etc.);
 - hunger/starvation;
 - environmental changes (humidity, pressure, precipitation, temperature, etc.);
 - body interfering electromagnetic fields/radiation (EMF/EMR) themselves {e.g., wearable and/or implantable high tech(nology) devices, including “smart” devices} and/or their interference of water distribution systems, and/or the disconnection from the Earth’s natural frequencies due to not being sufficiently grounded, geopathic stress, etc.; [12]
 - toxic chemical substances (biological, chemical, genetic, and/or radiological) and/or toxic {bio(logical)chem(ical)radio(logical) technological substances in the air, land, water, seed/food supply, and/or products [human-produced, produced by Artificial Intelligence (AI), and/or Nature];
 - medical racket products and/or devices {including, but not limited to, prescription and/or over-the-counter drugs; CT scans; MRI scans; mammograms; ultrasounds; antiSelf — Antibacterials/Antibiotics/Antimicrobials/Antivirals, Disinfectants, Hand Sanitizers, (Bio)Pesticides, Vaccination\$, etc.}; [13]
 - use of alcohol and/or non-prescription/non-over-the-counter drugs;
 - synergistic effects of chemical mixtures and/or EMF/EMR; [14]
 - mind control/psychological warfare/mass psychosis/applied behavioural psychology/perception programming — Remember that you Create Real-ity (thus, if you believe that you will have an illness or an injury, your Spirit may manifest that in your “physical” body); [15], [16]
 - human experimentation;
 - torture;
 - various conventional, nuclear, and/or exotic weapons (including, but not limited to electronic weapons; geoengineering; HAARP and/or related technologies; directed-energy weapons; 1G-8G; “electronic, psychotronic, or information weapons; chemtrails; high altitude ultra low frequency weapons systems; plasma, electromagnetic, sonic, or ultrasonic weapons; laser weapons systems; strategic, theater, tactical, or extraterrestrial weapons; chemical, biological, environmental, climate, or tectonic weapons”; etc.) and/or the systemic effects of War = Terrorism; [17], [18]
 - low vibrational energetic shifts in the Collective Human Consciousness Field;
 - low vibrational energetic shifts within the Universal Reality impacting the health of the “individual” self [Please refer to the **A Greater View of Our Health** section.];
 - not aforementioned disturbances on the mental-spiritual plane, emotional-psychic plane, and/or “physical-material” plane of the “individual” Self? If not, then why not? Why was an invisible to the naked eye micro-organism your first choice to blame? [19]
- 24) Why have we, as Human Beings, been so easily programmed with this version of “dis-ease” progression?
- 25) The items in question 23 all lead to an alkaline-acidity imbalance in our bodies and thus the body must work to re-balance the whole system. [20]
- 26) Why don’t we ask these & other questions about the fraudulent “germ theory of disease causation”?

Useful Quotes

“*There is no single cause of disease.* The ancients thoughts this, Béchamp proved it and was written out of history for his trouble. The relevance of his work to the dilemmas that plague modern medical science remains as yet unrealized.”

–D. L. Major, Editor’s Preface for *The Blood and its Third Anatomical Element* By Antoine Béchamp, page 7, ISBN# 978-0-9579858-7-2

“What are possible health effects from the electromagnetic fields? Back to Sir Jagadis Chandra Bose whose experiments on non-human animals, metals, and plants may give us more insight into the vibrational frequency response to various stimuli by human beings (human animal). He determined that both positive and negative responses to the same stimuli can travel along the nervous system at different speeds. Bose’s experiments showed that the double impulse response was seen both in non-human animals and in plants, thus also in human animals as well. [Reference 12] Let’s remember that Brian Greene pointed out that all matter vibrates at a different frequency, therefore we can say that all micro- and macro-structures in the human body also vibrate at different frequencies. [Reference 3] Thus, the positive and negative response from a stimulation may or may not have an impact on a human animal’s full body (which operates at a different frequency than the individual physical structures of the body), but may have an effect on the cells, tissues, organs, bones, etc. What determines if there is a positive, negative, and/or neutral effect? Does the frequency of the stimuli have to match the frequency of the cell, tissue, organ, bone, etc.?”

–Irucka Embry, E.I.T. (EcoC²S), Electromagnetic Waves as an Indoor Air Pollutant [<https://www.questionuniverse.com/oldway/electromagnetic-air-pollutions.pdf>]

“The cellularists, it is but fair to recall, regarding the cellule as the simplest anatomical element, believed it proceeded necessarily from a former cellule, *omnis cellula e cellula*, holding it to be the *vital unit*, living *per se*, and regarded an entire organism as the sum of these units. But we now know that that was a deduction from incomplete and superficial observations, for the cellule, a transitory anatomical element, has the microzyma for its anatomical element. It is this which alone possesses all the characters of an anatomical element, *living per se*, and which must be regarded as the unit of life. It is what I have already stated in the following terms:

“*The microzyma is at the beginning and at the end of every living organization. It is the fundamental anatomical element whereby the cellules, the tissues, the organs, the whole, of an organism are constituted living.*”

“Let us devote a few words to develop this idea. Let us penetrate a little further into this notion of a fundamental anatomical element, which, as has been said, implies that the microzyma is the living atom of the organization as the physical atom is the element of the molecule of a simple body. This would be true if the microzyma were unchangeable in its simplicity. But in reality it is essentially mutable, as are all living bodies; and it is especially so, in order that it may fulfil its numerous functions. In fact, the microzymas, functionally different in the different anatomical systems of the same species, and different at all ages, beginning with the embryonal stage, have been primitively those of the vitellus, after having been those of the

ovule. A microzyma then is not, properly speaking, an atom; but always anatomically simple, it becomes, by nutrition, that which it needs to become, so as to accommodate itself to each new condition of existence which the successive phases of the development of each anatomical system provide for it. It is thus that even in the embryo, in that which will be the ovary, a category of microzymas becomes again ovular microzymas to recommence the same cycle. I add that, taken as a whole and in its details, the THEORY HAS BEEN CONFIRMED, VERIFIED, CORROBORATED by a great number of other facts of general anatomy and of pathological anatomy and of physiology.¹”

“1. See particularly the notes and publications following:

- *A. Bechamp*: Facts useful for the history of the origin of the bacteria. Natural development of these little plants in the frozen parts of certain plants. C. R.. Vol. LXVTII. p. 466(1869).
- *A Estor*: Note for use in the history of the microzymas contained in animal cellules. C. R.. Vol. LXVIII. p. 519. It relates to the microzymas in bacterian evolution in a cyst which had just been removed.
- *Bechamp and Estor*: On the microzymas of pulmonary tubercle in the cretacious state. C. R., Vol. LXVII, p. 960 (1868). It relates to the discovery of microzymas in a condition of evolution within the tubercle, regarded as the remains of the destroyed epithelium of the pulmonary alveoli.
- *Bechamp and Estor*: Facts useful for the history of the microzymas and bacteria. Physiological transformation of bacteria into microzymas and of microzymas into bacteria in the digestive tube of the same animal. C. R., Vol. LXXVI, p. 1143 (1873).
- *Bechamp*: Facts useful for the history of the histological construction of the glairine of Molitg. C.R., Vol. LXXVI. p. 1485 (1873).
- *Bechamp*: The diseases of the silk worm. C. R.. various notes from 1866 to 1874. They relate to the pebrine, a parasitic disease, and to the flacherie, a microzymian disease, not parasitic.
- *J. Grasset*: On the histological phenomena of inflammation. Treatise regarding a new theory, based upon the consideration of the molecular granulations (microzymas). Gazette Med. de Paris, year 1873.
- *E. Baltus*: Theory of the Microzyma, a theoretic and practical study of pyogenesis (the formation of pus). Theses of the Faculty of Montpellier, year. 1874, No. 41.
- *J. Bechamp*: The microzymas and their functions at the different ages of the same being. Theses of the Faculty of Montpellier, 1875, No. 63.
- *A Bechamp*: Microzymas and disease; in “Les Microzymas,” etc., p. 744. (Chamalet, 60, Passage Choiseul.)
- *A Bechamp*: Puerperal septicaemia, pleurisy, the albuminuria and the preface to Microzymas et Microbes. (Chainalct, 60, Passage Choiseul, Paris.)
- *A. Tripier*: Electricity and Cholera. Genesis, prophylaxy and treatment. (Georges Carre, pub. 1884). In this memoir there will be found a comparison of the microbial system and the microzymian theory, highly original and at the same time the conception of what the eminent author terms the *individual coefficient*.”

–Antoine Béchamp, *The Blood and its Third Anatomical Element* By Antoine Béchamp, 1912, Translated by Montague R. Levenson, [WHALE Oct 2005] {http://www.whale.to/v/bechamp_b1.html}

“Among the causes which produce disease, a sudden chill in summer is the one most frequently indicated or invoked. The chill is at the same time an influence and a lowering of temperature. I do not insist on the fact that it is only something living which is painfully affected, so as to confine myself to the physical phenomenon. But the microzymas are very sensitive to variations of temperature; so much so that even the geological microzymas act regularly only at temperatures near 40° to 42 °C. (= 104° to 107° F.); in fact, the

microzymas of the chalk of Sens do not act so as to cause fecula to ferment in a temperature below 38° C. (= 100.4 °F.). Further a very slight lowering of the temperature is sufficient for the egg which should produce a bird not to produce one, and to putrefy or to produce the monsters of Daresté when the heat is not uniformly applied. In fact, the influences of the medium (as if it should become neutral or acid), which modify the activity of the microzymas acting alone, are various. That which happens to the isolated microzymas happens also to those of the egg and for those of the organism. Suppress the air and the egg does not become a fowl, but undergoes another kind of change.

“If from any cause whatever the air does not have access or has an insufficient access to the pulmonary alveolae, and their *epithelium* becomes the pulmonary tubercle, the cellules become reduced to their microzymas, which are then found in vibronian evolution in the tubercle in the cretaceous state. If the *decoordination* resulting from an irregular functioning of a part of an anatomical system is sufficient to bring on a malaise which is not removed, there will arise a diseased condition because of a sharp change of the conditions of existence of the microzymian anatomical elements, and the change in the medium sufficient to cause the decoordination will manifest itself by the vibronian and bacterian evolution of the microzymas of such or such part of the system. It is thus that in the disease called “Sand de rate” (Anthrax), so thoroughly studied by Davaine, the diseased microzymas end by evolving into what that learned physician called bacteridiae, the blood globules undergoing the changes which are so characteristic. The bacteridiae were not the cause of the diseased condition, but were one of its effects; *proceeding* from the *morbid microzymas* they were capable of inducing this diseased condition in the animal whose microzymas were in a condition to receive it. Hence it is seen that the alteration of natural animal matters is spontaneous, and justifies the old aphorism so concisely expressed by Pidoux: “*Diseases are born of us and in us.*”

“On the other hand, the disregard of this law of nature, the firm establishment whereof is completed by the present work, necessarily led M. Pasteur to deny the truth of the aphorism, and to imagine a *pathogenic panspermy*, as he had before conceived, *a priori*, that there was a panspermy of fermentations. That M. Pasteur after having been a sponteparist should reach such a conclusion was natural enough; he was neither physiologist nor physician, but only a chemist without any knowledge of comparative science.

“What is astonishing is, that he should have succeeded in procuring the triumph of a preconceived system among physicians and in academies, and to procure the rejection of the microzymian theory [without examination. Trans.]. For instance, an enlightened physician thus summed up the fundamental proposition of M. Pasteur: “The microbes always come from without; they constitute species which remount from generation to generation up to the origin of the world.”¹

“1. *Gazette medical*, Paris, 6th Series. Vol. V, p. 218. This is precisely what M. Chamberland said of micro-organisms in general: ‘Recherches sur l’origine et le développement des organismes microscopiques.’ Theses de la Faculté des Sciences. Paris, 1879. See also “Microzymas et Microbes,” p. 25, 2d Ed.”

–Antoine Béchamp, *The Blood and its Third Anatomical Element* By Antoine Béchamp, 1912, Translated by Montague R. Levenson, [WHALE Oct 2005] {http://www.whale.to/v/bechamp_b1.html}

“Notwithstanding many remarkable works, nothing is more obscure than the cause which presides over the development of diseases and their communicability. But what we can affirm is that when we are sick, it is we who suffer, and that the suffering is a cruel reality. This is because the *cause* of our diseased condition is always within ourselves. External causes contribute to the development of the affliction and hence of the disease only because they have brought about some material modification of the medium in which live the ultimate particles of the organized matter which constitutes us, namely, the microzymas. These external causes, by a succession of changes brought about, and depending on a crowd of variables, bring about correlatively a further change, which then bears precisely upon the physiological and chemical status of the microzymas.

“The tendency of the most recent researches is to show that miasms, like viruses, contain living microscopic organisms, something analogous to microzymas and bacteria, which proliferate in the blood or tissues of the animal and make it sick. I do not believe that things happen in that manner.

“Every phenomenon having a cause, I admit the existence of organized particles in miasms, but I do not believe in their proliferation in the organism, a proliferation which has nowhere been proven, up to the present time, and which many experiments positively contradict. Two authors, for instance, who agree in regarding the malignant pustule as a fermentation and who also agree that the blood of an animal attacked by a disease can communicate it to another animal of the same species, agree no longer when they endeavor to explain what they observe. For Davaine, the virulence of the carbuncular blood is due to the species of bacterium to which he gave the name of bacteridium. For Sanson, this virulence is due to a specific putrid change in the blood. According to him, the bacteria have nothing to do with it. Often they are not to be found in it; nothing organized can even be seen. He even doubts that the bacteria are animals, or plants, or even living beings. And the author remarks — and this time truly — that putrid albuminoid matter, although containing bacteria and even bacteridia, cannot communicate anthrax, even to an animal susceptible to it.

“What does all this mean? If neither bacteria nor the products of the putrefaction of albuminoid matters communicate anthrax?”

—Antoine Béchamp, *The Blood and its Third Anatomical Element* By Antoine Béchamp, 1912, Translated by Montague R. Levenson, [WHALE Oct 2005] {http://www.whale.to/v/bechamp_b1.html}

“And, in conclusion, I beg the permission of the Academy to repeat here something which Professor Estor and I said in a recent work upon this subject:

“After death (leaving here the domain of pathology to enter into that of the physiology of the species), it is essential that matter be restored to its primitive condition, for it has only been lent for a time to the living organized being. In recent years an extravagant role has been assigned to the airborne germs; the air may bring them, it is true, but it is not necessary that it should do so.’

“The microzymas, whether in the state of bacteria or not, are sufficient to assure by putrefaction the circulation of matter.

“The living being, filled with microzymas, carries in itself the elements essential for life, disease, death and destruction. And that this variety in results may not too much surprise us, the processes are the same. Our cellules, it is a matter of constant observation, are being continually destroyed by means of a fermentation very analogous to that which follows death. Penetrating into the heart of these phenomena we might really say, were it not for the offensiveness of the expression, that we are constantly rotting!”

—Antoine Béchamp, *The Blood and its Third Anatomical Element* By Antoine Béchamp, 1912, Translated by Montague R. Levenson, [WHALE Oct 2005] {http://www.whale.to/v/bechamp_b1.html}

“What is a germ? It is you. Not the Real You, but the you that is having an experience as _____.”

That idea stems from 2 sources. 1) There used to be a T-shirt in the The Bigelsen Method {<https://thebigelsenmethod.com/>} store that had on the front side: “Germs R Us” and on the back side: “The terrain is everything”. 2) The various books written by David Icke {<https://shop.davidicke.com>} that expose the “Matrix” and help us know who we Really Are.

“Your brain cannot distinguish reality from a dream or vision. If all you think of is”optimal health,” what is your body to do but follow suit. The next time you are experiencing symptoms of an illness, do not make any attempts to classify those symptoms in an illness category (i.e., cold, flu, etc.). Speak of it as a minor occurrence and watch how quickly you begin the healing process. For example, you have the symptoms of a cold. Instead of saying you have a cold, consider it to be a stuffy nose in your mind and description to others. It is very rare that I will claim any illness, and my wife can tell you, it is very rare that I am ill. Everyone in my house could have the flu and I would still be in good health.”

–Dr. Jermaine Ware, *Elements 4 Optimal Health: The Science, Philosophy and Art of Health*, Volume 1, 2014, page 101, ISBN# 978-1495414909 [<https://drjware.com/>]

“There is an implication to be found in the statement of Surgeon Verneuil, though probably not meant by him, to which assent must be given when understood. It is TRUE that there is no such THING as tetanus, small pox. syphilis, etc., as is implied by the general use of nosological terms. Disease is not a thing, an entity: it is a condition, and the error of regarding the condition of disease as an entity has confirmed, where it has not originated, much of the prevailing erroneous treatment of the sick.

“Nosological terms have a use; it is that of bringing to the mind of the physician a group of pathological symptoms, which may or may not be present in the case of the patient under consideration; from them, *when present*, the diseased condition of the patient can be recognized and treated. Unfortunately, through not understanding this truth, attempts are frequently made to treat, *not the patient*, but the name, which has been given to a collection of morbid symptoms.

“A broken limb is a thing; the inflammation which results from it is a condition, and if gangrene ensues the *gangrene* is not a *thing*, but a condition to be taken into consideration with all the other symptoms in the treatment of the patient. The surgeon, Verneuil, had probably a glimmering perception of this truth, but he misapplied it, for his theory and practice, as a physician, and the theory and practice of nearly all modern medicine assume that the condition to be treated is a thing having a name and this name is treated instead of the patient.”

–Montague R. Levenson, *The Blood and its Third Anatomical Element* By Antoine Béchamp, 1912, Translated by Montague R. Levenson, [WHALE Oct 2005] {http://www.whale.to/v/bechamp_b1.html}

“Corona virus — COVID-19, which is an acronym that stands for, “Certificate Of Vaccination Identification (C.O.V.I.D.) — Artificial Intelligence (1 represents the first letter in the alphabet = A and 9 represents the ninth letter in the alphabet = I).” ”

–Robert O. Young, CPT, MS, D.SC., Ph.D., Posted on 04/23/2020, pHowever Young Blog: The Corona Virus is Just a Concept That Only Exists on Paper [<https://phoreveryoung.wordpress.com/2020/04/23/the-corona-virus-is-just-a-concept-that-only-exists-on-paper/>]

“The analytical sensitivity of the rRT-PCR assays contained in the CDC 2019 Novel Coronavirus (2019-nCoV) Real-Time RT-PCR Diagnostic Panel were determined in Limit of Detection studies. **Since no quantified virus isolates of the 2019-nCoV were available for CDC use at the time the test was developed and this study conducted** [my emphasis], assays designed for detection of the 2019-nCoV RNA were tested with characterized stocks of in vitro transcribed full length RNA (N gene; GenBank accession: MN908947.2) of known titer (RNA copies/μL) spiked into a diluent consisting of a suspension of human A549 cells and viral transport medium (VTM) to mimic clinical specimen. Samples were extracted using the QIAGEN EZ1 Advanced XL instrument and EZ1 DSP Virus Kit (Cat# 62724) and manually with the QIAGEN DSP Viral

RNA Mini Kit (Cat# 61904). Real-Time RT-PCR assays were performed using the Thermo Fisher Scientific TaqPath™ 1-Step RT-qPCR Master Mix, CG (Cat# A15299) on the Applied Biosystems™ 7500 Fast Dx Real-Time PCR Instrument according to the CDC 2019-nCoV Real-Time RT-PCR Diagnostic Panel instructions for use.”

“Disease is an alarm signal, a friend that calls to inform us of danger. Disease is an effort to prevent death. Therefore, pain and so-called “disease” is more than a warning; it is an effort that opposes death. The symptoms that indicate disease are calls, or dispatches, asking for the material with which repair of bodily tissue may be made. Pains or discomforts of various functions or structures of the body are words asking for the constituent parts of blood, nerve fluids, tissue, bone, etc.

“If acids cause pain, the pain is a call for a sufficient amount of alkaline salts to balance an acid effect and change fluids to a balanced and natural state. Healthy synovial fluid (fluid of the joints — the lubricator) is neither acid nor alkali but yet contains both in combination. Should the alkaline salts become deficient in amount for any cause, the acid at once becomes a disturbing element and hurts the nerves that pervade the membranes of periosteum (bone covering) of the internal structure of knee, elbow, or other joints of the human anatomy. This pain, or word, cannot be considered bad or malignant in any sense.

“So then it matters not what name may be given to nature’s demand for reinforcements through the medium of pain or any symptom that indicates a deviation from the plane of health; one thing and one thing alone is needed, i.e., to supply the blood with the dynamic molecules, the twelve cell salts, that set up vibration or action in the human machine.

“Poisons, of whatever name or nature, do not and cannot supply deficiencies and cure disease for the simple reason that poisons are not constituent parts of the human organism.

“Poisons oppose calls for help and tend to still the voice of nature; therefore, the effect of poison is towards death. Many have survived the effects of poisons, but equally many have been hurried to their graves.

“A proper use of mineral or cell salts of the blood in the potency and proportion found in the ashes of a cremated body will do all that can be done medicinally to supply deficiencies and restore normal conditions.

“The cell salts form the chemical base of the blood, and blood builds all tissue and fluids of the body.”

–Adapted from *Chemistry of the Cosmos* by Dr. George Carey. Featured in *Facial Diagnosis of Cell Salt Deficiencies: A User’s Guide* By David R. Card, page 12

“Here is one example of how the trick may play out. A toxin creates a disease. The toxin might be pesticides or industrial pollution or wireless technology radiation. The toxin damages millions of people and their communities. Companies or their insurance provider may be liable for civil or criminal violations. Then a virus is blamed. A “cure” is found in a “vaccine.” The pesticide or other toxic exposure is halted just as the vaccine is introduced, and presto, the sickness goes away. The vaccine is declared a success, and the inventor is declared a hero. A potential financial catastrophe has been converted to a profit, including for investors and pension funds. As a portfolio strategist, I admit it has been a brilliant trick and likely has protected the insurance industry from the bankrupting losses it would experience if it had to fairly compensate the people and families destroyed.”

“Medical research, no matter how much effort, money and dedication goes into it, always seems to give us a deceptive answer. There are a lot of promises in the beginning which more often than not end up in disasters. The problem is that many times the medical drugs used to manipulate the human body are so deep and insidious in their effects that when we finally perceive their long-term side effects, it is usually too late; the damage has already been done.

“Today everybody thinks that it was only thalidomide and a handful of other drugs that have been harmful, while everything else is considered safe and “innocent.” Thalidomide showed its appalling effects upon the human organism in quite a short time because it was a very crude drug. This was the reason why it was soon recognized and isolated, though not without leaving some very tragic consequences in its wake. Can you imagine what could have happened if its effects had not been discovered when they were?

“What we have to understand is that all chemical drugs, no matter how innocent they may appear in the beginning, are bound to have some type of effect, be it large or small, on the human organism. Some drugs or vaccinations may have such a subtle and insidious influence upon the body that their side effects may be apparent only five to ten years later.

“In 1978, in my book *The Science of Homeopathy*, I advanced the theory that vaccinations deeply disturb the organism before they can protect it from a specific disease. But few have asked about the long-term effects of vaccinations. Who can really calculate the net profit or loss from such practice? We all know that vaccinations are “addressed” to the immune system and that their aim is to “force” it to produce antibodies to protect the organism from future attacks of a specific infectious disease.

“This idea was really “clever,” but the question still remains for future generations to answer whether it was clever enough to outsmart nature.

“Several other questions which will take a long time to answer are:

- “Can nature (the organism), under the stress of a vaccine, suffer an unpredictable reaction which arranges its deeper structures of defense, such as the reticuloendothelial, immune, sympathetic and parasympathetic systems, such that it can no longer defend itself from future diseases of a different type?
- “Is it possible that by using such powerful agents we are accelerating the body’s manifestation of its latent predisposition for chronic diseases?
- “Who can foretell, with any degree of certainty, the long-range consequences of such subtle intervention in the innermost workings of the human organism?

“In my teachings, I have alluded repeatedly to the fact that we have meddled in an unwise and serious manner with the immune system, and that it is possible the present “explosion” of some of the most terrifying chronic diseases of our times—like multiple sclerosis, cancer and rheumatoid arthritis—may have been precipitated largely by certain vaccinations. Such practices may have consequences that appear ten to fifteen years after the initial vaccination, which I believe is the case with multiple sclerosis.”

–*A New Model for Health and Disease: Suggesting an Explanation for the Explosion of: AIDS, Cancer, Asthma, Candida, Epilepsy, Alzheimer’s, Tuberculosis, Schizophrenia, Multiple Sclerosis, Allergic Conditions, Rheumatoid Arthritis, Chronic Fatigue Syndrome* New Expanded Edition By George Vithoulkas, North Sporades, Greece: International Academy of Classical Homeopathy, 2008, Pages 169-171, ISBN# 1-55643-087-6 [<https://www.vithoulkas.com/>]

“I finally had the opportunity to ask Dr. Montagnier about the reference when he lectured in San Diego at the grand opening of the U.C.S.D. AIDS Research Center, which is still run by Bob Gallo’s former consort, Dr. Flossie Wong-Staal. This would be the last time I would ask my question without showing anger. In response Dr. Montagnier suggested, “Why don’t you reference the C.D.C. report?”

““I read it,” I said. “That doesn’t really address the issue of whether or not H.I.V. is the probable cause of AIDS, does it?”

“He agreed with me. It was damned irritating. If Montagnier didn’t know the answer, who the hell did?

“One night I was driving from Berkeley to La Jolla and I heard an interview on National Public Radio with Peter Duesberg, a prominent virologist at Berkeley. I finally understood why I was having so much trouble finding the references that linked H.I.V. to AIDS. There weren’t any, Duesberg said. No one had ever proved that H.I.V. causes AIDS. The interview lasted about an hour. I pulled over so as not to miss any of it.”

–Kary Mullis, *The Medical Establishment vs. The Truth* Book Excerpt, *Penthouse* Sept. 1998 [<https://virusmyth.com/aids/hiv/kmdancing.htm>]

“Obsessed with the invisible microbe, virus, protozoa as ail important excitants of disease, subservient to laboratory methods of diagnosis, hidebound by our system of nomenclature, we often forget the most fundamental of all rules for the physician, that the right kind of food (nutrition) is the most important single factor in the promotion of health and the wrong kind of food the most important single factor in the promotion of disease.”

–McCarrison, 1936, as quoted in *Second Thoughts on Disease: A Controversy and Béchamp Revisited* By Drs Kalokerinos & Dettman [<http://whale.to/w/kal.html>]

“ABOUT BIOWEAPONS: ...“Biolabs are acid labs. There are NO bioweapons. Germs are born in us and from us. Viruses are acidic waste from cellular breakdown or fermentation. Antibiotics have been the result. Which are nothing more or less than the acidic waste of fermentation. In other words, you take a yeast-like penicillium and ferment sugar and you end up with the so-called antibiotic which is the acid waste from fermentation. It is morbid thinking to believe you can cure disease with disease.””

–Dr. Robert O. Young [Dr. Judy Mikovits and Dr. Robert Young — re COVID, Vaccines, Viruses, FACE MASKS AND MORE! By Robert O. Young, CPT, MS, D.SC., Ph.D., 08/30/2020, <https://phoreveryoung.wordpress.com/2020/08/30/dr-judy-mikovits-and-dr-robert-young-re-covid-vaccines-viruses-face-masks-and-more/>]

“The Microbes of Plague, Cholera, Tetanus, etc.

“The Times of January 13th, 1896, quotes a Report to the Plague Commission at Agra, by Mr. Hankin, Bacteriologist for the North-West Provinces. “There was no doubt that cases of Plague occurred among human beings in which no microbes were visible at the time of death. This fact was first proved by the members of the German and Austrian Plague Commission.”

“The “Comma bacillus” was discovered by Koch, who proclaimed it to be the cause of Asiatic Cholera. Dr. Klein, who was about to proceed to India to investigate the origin of that disease, did not believe in Professor Koch’s statement and experimentally drank a wineglassful comma bacilli in “pure culture.” No effect followed; and Dr. Klein remains alive and well to this day. At Hamburg Pettenkofer and Emmerich swallowed the actual dejecta of a cholera patient with result similarly negative. Pettenkofer concluded that “the specific virus of cholera does not arise from the comma bacillus, but is evolved in the human organism.””

“The Germ Theory Fetish

“Now, the forcing of these inoculations upon individuals by law is one of the worst of tyrannies imaginable, and should be resisted, even to the death of the official who is enforcing it. English-speaking peoples need to have their ideals of liberty refreshed by a study of the history of Wat Tyler, who headed one of the most justifiable rebellions in history, and although treacherously murdered by the then Lord Mayor of London, his example should be held up to all our children for imitation.

“I confess, ladies and gentlemen, when I see the constantly encroaching power of physicians in this country and in the United States, I view with some alarm some of the provisions of that nobly~intended measure, the Insurance Bill, now pending in the Parliament of this country, whereby so many of the Insurance benefits are made dependent upon obedience to the orders of a physician. Nor am I unmindful of the fact that were only justice done to the people with regard to the land, in the manner so admirably pointed out by the “prophet of San Francisco,” all the elaborate machinery of the Insurance Bill could be dispensed with, for it is not charity that the people need—only justice!

“But, *revenons a nos moutons*. The entire fabric of the germ theory of disease rests upon assumptions which not only have not been proved, but which are incapable of proof, and many of them can be proved to be the reverse of truth. The basic one of these unproven assumptions, the credit for which in its present form is wholly due to M. Pasteur, is the hypo thesis that all the so-called infectious and contagious disorders are caused by germs, each disease having its own specific germ, which germs have existed in the air from the beginning of things, and that though the body is closed to these pathogenic germs when in good health, when the vitality is lowered the body becomes susceptible to their inroads. My mind is so constituted that it can perceive in the assumption of this, as a fact, only an instance of such incredible folly that it really matches the fetish of those whom we regard as savages, and serves to show how little the human intellect has progressed from the mental state of the savage.”

–*Pasteur the Plagiarist: The Debt of Science to Béchamp* By Dr. Montague R. Levenson, 1911. Delivered at Claridges Hotel, London, England on May 25, 1911, pages 11-13, <https://babel.hathitrust.org/cgi/pt?id=mdp.39015081399316&view=1up&seq=1>

“He who considers disease results to be the disease itself, and expects to do away with these as disease, is insane. It is an insanity in medicine, an insanity that has grown out of the milder forms of mental disorder in science, crazy whims. The bacteria are results of disease. In the course of time we will be able to show perfectly that the microscopical little fellows are not the disease cause, but that they come after, that they are scavengers accompanying the disease, and that they are perfectly harmless in every respect. They are the outcome of the disease, are present wherever the disease is, and by the microscope it has been discovered that every pathological result has its corresponding bacteria. The Old School consider these the cause, but we will be able to show that disease cause is much more subtle than anything that can be shown by a microscope. We will be able to show you by a process of reasoning, step by step, the folly of hunting for disease cause by the implements of the senses.”

–James Tyler Kent, A.M., M.D., *The Art and Science of Homeopathic Medicine*, Mineola, NY: Dover Publications, Inc., Page 22, 2002. [Originally published as *Lectures on Homœopathic Philosophy* in 1900.]

“Psora is the cause of all contagion. If man had not had psora he would not have had the other two chronic miasms, but psora, the oldest, became the basis of the others. The physicians of the present day do not

comprehend Hahnemann's definition of psora, they think it meant an itch vesicle or some sort of tetter. They regard itch as only the result of the action of a bug that crawls in the skin making vesicles, all of which is external. This is quite in keeping with man's present form of investigation, because he can comprehend only that which he discovers by his senses. Hahnemann's idea of psora, as we shall see when we come to study it, is wholly different from these perverted views. Psora corresponds to that state of man in which he has so disordered his economy to the very uttermost that he has become susceptible to every surrounding influence. The other day I used the illustration of civil government, and said if our civil government is evil in its centre it will be in disorder in its uttermost. So if a man is evil in very interiors, *i.e.*, in his will and understanding, and the result of this evil flows into his life, he is in a state of disorder. Let man exist for thousands of years thinking false theories and bringing them into his life, and his life will become one of disorder.

"Later we will be able to show that this disordered condition of the economy is the underlying and fundamental state of the nature of psora which ultimates upon the body in tissue changes. Suppose a man starts out and believes that it is right for him to live upon a certain kind of food that is very distasteful to him; he lives upon that diet until he thinks (from his belief) that he really loves it, and in time his very outermost becomes as morbid as he is himself. When man is insane in his interior it is only a question of time and his body will take on the results of insanity because the interior of man forms the exterior. If the interior is insane the exterior is distorted, and is only suitable to the kind of insane or disordered life that dwells in it. False in the interior, false in the exterior, so that the body becomes, as it were, false. This is speaking from analogy, but you will come to see that it is actually true.

"Each and everything that appears before the eyes is but the representative of its cause, and there is no cause except in the interior. Cause does not flow from the outermost of man to the interior, because man is protected against such a state of affairs. Causes exist in such subtle form that they cannot be seen by the eye. There is no disease that exists of which the cause is known to man by the eye or by the microscope. Causes are infinitely too fine to be observed by any instrument of precision. They are so immaterial that they correspond to and operate upon the interior nature of man, and they are ultimated in the body in the form of tissue changes that are recognized by the eye. Such tissue changes must be understood as the results of disease only or the physician will never perceive what disease cause is, what disease is, what potentization is, or what the nature of life is. This is what Hahnemann meant when he speaks of the fundamental causes as existing in chronic miasms.

"Just as soon as man lives a disorderly life he is susceptible to outside influences, and the more disorderly he lives the more susceptible he becomes to the atmosphere he lives in. When man thinks in a disorderly way he carries out his life in a disorderly way, and makes himself sick by disorderly habits of thinking and living. This deranged mental state Hahnemann most certainly recognizes, for he tells us everywhere in his teaching to pay most attention to the mental state. We must begin with such signs as represent to the mind the beginning of sickness, and this beginning will be found in the mental disorder as represented by signs and symptoms, and as it flows on we have the coarser manifestations of disease. The more that disease ultimates itself in the outward form the coarser it is and the less it points the physician to the remedy. The more mental it is the more signs there are to direct the physician to the remedy.

"In these investigations the ascertainable physical constitution of the patient, etc. are to be taken into consideration." This is the second state following the first one disordered. This deals with the outermost, it relates to externals. You have to consider both the internal and external man; that is, you have to consider causes that operate in this disordered innermost, and then the ultimates which constitute the outward appearance, particularly when the affection is chronic. These two things must be considered, the nature or *esse* of the disease and its appearance. At the present day diseases are named in the books from their appearance and not from any idea as to what the nature or *esse* of sickness is, hence the disease names in our books are misleading, as they do not have reference to the sick man but to ultimates. If the disease has terminated the liver, numerous names are applied to them, and such terminations are called diseases. Consumption is a tubercular state of the lungs, which is but the result of an internal disorder which was operating in the interior

long before the breakdown of tissue.

“The physicians of these days will tell you that they go back to the cause, but they present no cause; they only bring up the superficial conditions that make the consumptive man worse. They will also tell you that a bacillus is the cause of tuberculosis. But if the man had not been susceptible to the bacillus he could not have been affected by it. As a matter of fact, the tubercles come first and the bacillus is secondary. It has never been found prior to the tubercle, but it follows that, and comes then as a scavenger. The cause of the tubercular deposit rests with the psora, the chronic miasm. Bacilli are not the cause of disease, they never come until after the disease.

“Allopaths are really taking the sequence for the consequence, thus leading to a false theory, the bacteria theory. You may destroy the bacteria and yet not destroy the disease. The susceptibility remains the same, and only those that are susceptible will take the disease. Bacteria have a use, for there is nothing in the whole world that does not have a use, and there is nothing sent on earth to destroy man. The bacteria theory would make it appear that the all-wise Creator has sent these micro-organisms here to make man sick. We see from this paragraph that Hahnemann did not adopt any such theory as bacteriology.

“This subject will be taken up in these lectures and fully illustrated, but I might throw out a few hints to set you thinking until we come to it again. We know that a dissecting wound is very serious if the body dissected is recently dead, and this we would suppose to be due to some bacteria of wonderful power capable of establishing such a dreadful erysipelatous poisoning that would go into man’s blood and strike him down with a sort of septicaemia. In truth, soon after death we have a ptomaine poison, the dead body poison, which is alkaloidal in character, but we do not yet discover the presence of bacteria. The poison is there, and if a man pricks himself while dissecting that body and does not take care of the wound he may have a serious illness and die. But if after the cadaver has remained some time and becomes infected with bacteria, the dissector pricks himself the wound is not dangerous.

“The more bacteria the less poison. A typhoid stool when it first passes from the bowel has a very scanty allowance of bacteria, and yet it is very poisonous. But let it remain until it becomes black with bacteria and it is comparatively benign. Why does the poison not increase with the bacteria? You can potentize, as I have done, a portion of a tuberculous mass alive with tubercular bacilli, and after potentizing it, after being triturated with sugar of milk and mashed to a pulp, it will continue to manifest its symptoms in the most potent form. You can precipitate the purulent tubercular fluid in alcohol, precipitate the entire animal life and potentize the supernatant fluid until you have reached the thirtieth potency, and having potentized or attenuated it until no microbe can be found, yet, if administered to healthy man, it will establish the nature of the disease in the economy, which is prior to phthisis. Thus we have the cause of phthisis, not in the bacteria, but in the virus, which the bacteria are sent to destroy. Man lives longer with the bacteria than he would without them. If we could succeed today in putting a fluid into the economy that would destroy the bacteria that consumptive would soon die.”

—James Tyler Kent, A.M., M.D., *The Art and Science of Homeopathic Medicine*, Mineola, NY: Dover Publications, Inc., Page 49-53, 2002. [Originally published as *Lectures on Homœopathic Philosophy* in 1900.]

“ But these assertions (of Surgeon Verneuil) are reduced to nothing, when we call to mind that the pretended germs of the air are only the microzymas of organisms which have disappeared, which had become bacteria by evolution; that even at the Academy of Medicine I said—and no one ventured to contradict me—that no one had ever been able to reproduce a disease on the nosological roll by taking the pretended pathogenic microbe in normal air, but only in the diseased animal. And I add, that just as with time the fibrinous microzymas lose the property of decomposing oxygenated water so, as proved long ago by Davaine, after a short time the blood of an animal which had died of anthrax [sang de rate] no longer communicated that diseased condition; and the same is true in all cases.

THUS NORMAL AIR NOT ONLY DOES NOT, BUT CANNOT, CONTAIN THE PRETENDED PATHOGENIC MICROBES, AND THE VERY PRINCIPLE OF MICROBIAN MEDICINE CONSTITUTES A FUNDAMENTAL ERROR.”

–Antoine Béchamp, *The Blood and its Third Anatomical Element* By Antoine Béchamp, 1912, Translated by Montague R. Levenson, [WHALE Oct 2005] {http://www.whale.to/v/bechamp_b1.html}

“In man the provocative cause of microbial disease may be a disturbance in any of the factors of his external or internal environment—be it weather conditions, availability of food, working habits, economic status, or emotional stress.

“Pasteur had clearly visualized these complexities and had pointed out explicitly in his writings that the response of the infected individual was determined by his hereditary environment, his state of nutrition, his environment including the climate, and even his mental state. In the course of studies on the disease of silkworms known as flacherie Pasteur came to the conclusion, startling for the time, that the microorganisms present in such large numbers in the intestinal tract of the sick worms were ‘more an effect than a cause of the disease.’ These words were echoed a half century later by G. B. Shaw’s facetious remark in the preface to *The Doctor’s Dilemma*: ‘The characteristic microbe of a disease might be a symptom instead of a cause.’”

–René Dubos, *Mirage of Health: Utopias, Progress, and Biological Change*, pages 93-94, ISBN 978-0-8135-1260-0 / 0-8135-1260-3

“If virulent germs were normal in the atmosphere, how numerous would be the occasions for their penetration independently by way of the lungs and intestinal mucus! There would not be a wound, however slight, the prick even of a pin, that would not be the occasion for infecting us with smallpox, typhus, syphilis, gonorrhoea.”

–Professor Béchamp, as quoted in *Béchamp or Pasteur?: A Lost Chapter in the History of Biology* By Ethel D. Hume on page 308 [prefaced by *Pasteur: Plagiarist, Imposter: The Germ Theory Exploded* By R. B. Pearson], ISBN# 978-1-46790-012-6, 2011

“The general public, however intelligent, are struck only by that which it takes little trouble to understand. They have been told that the interior of the body is something more or less like the contents of a vessel filled with wine, and that this interior is not injured — that we do not become ill, except when germs, originally created morbid, penetrate into it from without, and then become microbes.

“The public do not know whether this is true; they do not even know what a microbe is, but they take it on the word of the master; they believe it because it is simple and easy to understand; they believe and they repeat that the microbe makes us ill without inquiring further, because they have not the leisure — nor, perhaps, the capacity — to probe to the depths that which they are asked to believe.”

–Professor Béchamp, preface to *La Théorie du Microzyma*, as quoted in *Béchamp or Pasteur?: A Lost Chapter in the History of Biology* By Ethel D. Hume on page 304 [prefaced by *Pasteur: Plagiarist, Imposter: The Germ Theory Exploded* By R. B. Pearson], ISBN# 978-1-46790-012-6, 2011

“In typhoid fever, in gangrene, and in anthrax, the existence has been proved of bacteria in the tissues and in the blood, and one was very much disposed to take them for granted as cases of ordinary parasitism. It is evident, after what we have said, that instead of maintaining that the affection has had as its origin and cause

the introduction into the organism of foreign germs with their consequent action, one should affirm that one is dealing here with an alteration of the functions of microzymas, an alteration indicated by the change that has taken place in their form.”

–Professor Béchamp, *Comptes Rendus* 75, p. 1525, 1869, as quoted in *Béchamp or Pasteur?: A Lost Chapter in the History of Biology* By Ethel D. Hume on page 219 [prefaced by *Pasteur: Plagiarist, Imposter: The Germ Theory Exploded* By R. B. Pearson], ISBN# 978-1-46790-012-6, 2011

“My researches upon fermentations and ferments, particularly upon molecular granulations, date back some fifteen years, and those which Professor Estor and I conducted for the purpose of generalizing my earlier observations have led to this result: that the animal is reducible to the microzyma. But the microzyma, whatever its origin, is a ferment; it is organized, it is living, capable of multiplying, of becoming diseased and of communicating disease.

“All microzymas are ferments of the same order — that is to say, they are organisms, able to produce alcohol, acetic acid, lactic acid and butyric acid.

“In a state of health the microzymas of the organism act harmoniously, and our life is, in every meaning of the word, a regular fermentation. In a state of disease, the microzymas do not act harmoniously, and the fermentation is disturbed; the microzymas have either changed their function or are placed in an abnormal situation by some modification of the medium. This was what I tried to make clear by a positive example of a kind which would leave no room for misunderstanding either the extent or the bearings of the conclusion.”

–Antoine Béchamp, *The Blood and its Third Anatomical Element* By Antoine Béchamp, 1912, Translated by Montague R. Levenson, [WHALE Oct 2005] {http://www.whale.to/v/bechamp_b1.html}

“The ultimate foundation question of the science of bacteriology is, How did the disease germs become disease germs? But the question is still unanswered.”

–Woods Hutchinson. A.M., M.D. As quoted in *The Golden Calf: An Exposure of Vaccine-Therapy* By Charles W. Forward, Second Edition, 1933

“When by the attentive study of these facts one has become convinced that the microzymian theory is their pure and simple expression, it will be at once recognized that the cellule is already an organ in which, by nutrition, the conditions of the preservation of the microzymas with the constancy and regularity of their chemical and physiological functions are unceasingly realized. And it will thus be understood that the microzymian molecular granulations, whether of certain cellules, of the vitellus, or of the blood, also realize after their manner the conditions of this constancy and regularity. When these conditions are no longer realized they may undergo vibrionian evolution.

“The most prominent fact in the history of the microzymas, that which has been the most disputed, precisely because of their capacity to undergo vibrionian evolution, is the fact of their anatomical autonomy. Now this faculty, which is only manifested when the normal conditions of existence of the microzymas, functioning as anatomical elements, are no longer fulfilled, is the best proof which could be given of the change which has happened in their condition, causing their irregular and changed functioning.

“In fact, in their various anatomical situations, the microzymas remain morphologically similar to themselves. They function in each cellule, in each organ, in each anatomical system, naturally, chemically and physiologically for themselves while preserving their individuality; at the same time that by *coordination*, according to the happy and thoroughly scientific expression of Dr. Antoine Cros, they function for the benefit of the

microzymian molecular granulations of the cellules, of the organs and of the various anatomical systems taken altogether, whose physiological condition of health is preserved by them.

“But if from some etiological cause certain changes happen in an organ, changes such as auscultation or percussion can precisely ascertain, as, for instance, an increase in the volume of the spleen, M. Cross tells us that there is a *decoordination*, a functional perturbation in the entire organism and disease. It is worth mentioning that from the time Dr. Cros became acquainted with the microzymian theory, he did not hesitate to recognize the microzymas as the anatomical agents of the decoordination; how does it happen?

“Among the causes which produce disease, a sudden chill in summer is the one most frequently indicated or invoked. The chill is at the same time an influence and a lowering of temperature. I do not insist on the fact that it is only something living which is painfully affected, so as to confine myself to the physical phenomenon. But the microzymas are very sensitive to variations of temperature; so much so that even the geological microzymas act regularly only at temperatures near 40 to 42 °C. (= 104 to 107 °F.); in fact, the microzymas of the chalk of Sens do not act so as to cause fecula to ferment in a temperature below 38 °C. (= 100.4 °F.). Further a very slight lowering of the temperature is sufficient for the egg which should produce a bird not to produce one, and to putrefy or to produce the monsters of Daresté when the heat is not uniformly applied. In fact, the influences of the medium (as if it should become neutral or acid), which modify the activity of the microzymas acting alone, are various. That which happens to the isolated microzymas happens also to those of the egg and for those of the organism. Suppress the air and the egg does not become a fowl, but undergoes another kind of change.

“If from any cause whatever the air does not have access or has an insufficient access to the pulmonary alveolae, and their *epithelium* becomes the pulmonary tubercle, the cellules become reduced to their microzymas, which are then found in vibronian evolution in the tubercle in the cretacious state. If the *decoordination* resulting from an irregular functioning of a part of an anatomical system is sufficient to bring on a malaise which is not removed, there will arise a diseased condition because of a sharp change of the conditions of existence of the microzymian anatomical elements, and the change in the medium sufficient to cause the decoordination will manifest itself by the vibronian and bacterian evolution of the microzymas of such or such part of the system. It is thus that in the disease called “Sand de rate” (Anthrax), so thoroughly studied by Davaine, the diseased microzymas end by evolving into what that learned physician called bacteridiae, the blood globules undergoing the changes which are so characteristic. The bacteridiae were not the cause of the diseased condition, but were one of its effects; *proceeding* from the *morbid microzymas* they were capable of inducing this diseased condition in the animal whose microzymas were in a condition to receive it. Hence it is seen that the alteration of natural animal matters is spontaneous, and justifies the old aphorism so concisely expressed by Pidoux: “*Diseases are born of us and in us.*”

“On the other hand, the disregard of this law of nature, the firm establishment whereof is completed by the present work, necessarily led M. Pasteur to deny the truth of the aphorism, and to imagine a *pathogenic panspermy*, as he had before conceived, *a priori*, that there was a panspermy of fermentations. That M. Pasteur after having been a sponteparist should reach such a conclusion was natural enough; he was neither physiologist nor physician, but only a chemist without any knowledge of comparative science.

“What is astonishing is, that he should have succeeded in procuring the triumph of a preconceived system among physicians and in academies, and to procure the rejection of the microzymian theory [without examination. Trans.]. For instance, an enlightened physician thus summed up the fundamental proposition of M. Pasteur: “The microbes always come from without; they constitute species which remount from generation to generation up to the origin of the world.”

“An eminent surgeon, M. Verneuil, ended by admitting as a demonstrated theorem that there is no spontaneous tetanus, that there is no spontaneous small pox, syphilis, glanders, hydrophobia, tuberculosis, charbon or malignant pustule; declaring that the pathogenic problem consisted solely in discovering how and when the *microbe*, also called virus, come from without, penetrates into the organism; declaring that the question

is thus stated between old medicine and the microbial medicine “with extreme simplicity and without the least ambiguity”.

“But these assertions (of Surgeon Verneuil) are reduced to nothing, when we call to mind that the pretended germs of the air are only the microzymas of organisms which have disappeared, which had become bacteria by evolution; that even at the Academy of Medicine I said—and no one ventured to contradict me—that no one had ever been able to reproduce a disease on the nosological roll by taking the pretended pathogenic microbe in normal air, but only in the diseased animal. And I add, that just as with time the fibrin-ous microzymas lose the property of decomposing oxygenated water so, as proved long ago by Davaine, after a short time the blood of an animal which had died of anthrax [sang de rate] no longer communicated that diseased condition; and the same is true in all cases.

“THUS NORMAL AIR NOT ONLY DOES NOT, BUT CANNOT, CONTAIN THE PRETENDED PATHOGENIC MICROBES, AND THE VERY PRINCIPLE OF MICROBIAN MEDICINE CONSTITUTES A FUNDAMENTAL ERROR.”

—Antoine Béchamp, *The Blood and its Third Anatomical Element* By Antoine Béchamp, 1912, Translated by Montague R. Levenson, [WHALE Oct 2005] {http://www.whale.to/v/bechamp_b1.html}

“Berthelot did not ascribe any role to these molecular granulations, and believing that he had performed the experiment “protected from contact with air”, he asserted, as in 1857, that the presence of calcic carbonate (*the chalk*) or of any alkaline bicarbonate directs the decomposition of the nitrogenised body (in this instance, the gelatine) in a certain manner which sets up the fermentation by regulating the steps of the phenomena. In short, Berthelot had not yet distinguished between the calcareous rocks (the chalk) and pure calcic carbonate, exactly like Pasteur in this matter, and did not yet believe that atmospheric germs had anything to do with the appearance of the molecular granulations. In short, he naturally believed that the lactic yeast of Pasteur was also constituted of molecular granulations, and that there was nothing to show that it was organized and living; as was the opinion of Pasteur, who, in 1858, stated that he had argued *‘on the hypothesis* that the new yeast was organized and living.”

“This, then, was the state of knowledge in 1860, and even much later. It was not known, although it already stood out from the facts of my memoir of 1857, and which the microzymian theory has since confirmed, that that which characterizes the fact of a living organization is not essentially, as the naturalists of the schools still believe, the establishment of the existence of some organ or structure, nor is it the presence of movement more or less spontaneous or voluntary in any living being whatever, or such as a microzyma, molecular granulation or lactic yeast, or such as a vibrionien. Rather, living organization is characterized by the property of producing and secreting zymases, each according to its nature or species; and the production of the chemico-physiological phenomena of transformation called fermentation, which are acts of nutrition, that is to say, of digestion, followed by absorption, assimilation, disassimilation, and so forth, and finally, the ability to reproduce itself if all conditions dependent upon nutrition are fulfilled.

“This is what Pasteur could not understand when he alleged in 1860 that the fermentation of cane sugar by beer yeast was correlative to the multiplication of the yeast, which is as great a physiological heresy as to imagine that an animal could be nourished upon sugar alone.

“But soon after, Pasteur, who had not yet explicitly invoked the germs in explanation of the alterations of organic matters and the production of the alterations of organic matters and the production of ferments, would explain by them what he had before explained by spontaneous generation; in short, he held my verification of the hypothesis to be so rigorously correct that in 1862 he published a memoir against spontaneous generation, wherein the alteration of all organic matters was explained as Schwann had done, by applying his method as improved by Claude Bernard.

“That was his second plagiarism.

“His experiments in the memoir of 1852 had been made with the organic substances treated, cooked, for the purpose of killing the germs which the air might have deposited upon them. In 1863 he repeated them upon blood and flesh, not cooked, for the purpose of proving that they did not contain germs capable of becoming vibrios, and that, without atmospheric germs, they would be unalterable. Not being able to heat flesh in the same manner as blood, he applied my method, substituting alcohol in the place of creosote.

“That was a third plagiarism. But he could not see the vibrioniens which, in spite of the antiseptic agent, were developed in the depths of the flesh, and he concluded that neither the blood nor muscle became putrid because the germs of the air were absent from them. And he regarded as proven that there was nothing living in the blood or in the flesh, and that all animal matters, without the germs of the air, would remain indefinitely unchanged.

“While Pasteur thus experimented, I continued to develop the consequences of my memoir of 1857. I demonstrated especially that not only were the atmospheric germs unnecessary for vinous fermentation, but that they were injurious, and that the grape carried normally, upon itself, the cellules of the ferments of the lees; not only the germs but the fully developed ferment. This was in 1864.

“At last, in 1865, I announced to Dumas the fact of the existence in the milk, and in the chalk, of the agent which is the cause of the spontaneous alteration of the former and of that which enables the second to act as lactic ferment, agents to which in the following year I gave the name of microzymas. Pasteur, who had been named a member of the commission upon my memoir upon the ferment of the chalk, said not a word, and I continued with Estor the study of the microzymas of the higher organisms up to applications to pathology, as may be seen in the postface. This was in 1870.

“In 1872 Pasteur attempted his boldest plagiarism; he discovered all of a sudden, eight years after my discovery thereof (I will state elsewhere on what occasion), that the ferment of vinous fermentation exists naturally upon the grape. In this connection he discovered also that plant and animal matters contain normally the things which cause them to alter spontaneously; that their cellules, without the atmospheric germs, are ferments. In other words, he repudiated his experiments and conclusions of 1862. He announced that his “new discoveries” would mark an epoch in general physiology; and he asserted that he had thrown a great light upon the phenomena of fermentation and *“had opened a new path to physiology and medical pathology.”*

“This was too much: up till that time I had treated the man with consideration; but now he must be properly exposed.

“First I, then Estor and I together, protested energetically. Our protests were inserted literally by Dumas and by Elie de Beaumont; the complete text can be read in the *Comptes Rendus*, Vol. LXXV, pp1284, 1519, 1523 and 1831. Pasteur replied by a subterfuge, to which we replied as follows: “We request the Academy to permit us to record that the observations inserted in the names of M. Béchamp and of ourselves remain unanswered.”.

“Pasteur said no more, and abandoning “the new road” he pretended to have opened (a road which we showed we had not only opened but had sturdily traversed) he retraced his steps. Then, while since 1858 he had not disputed the meaning of any of the results, of any of the acts upon which the microzymian theory rests, results and facts which he knew to be exact and the discovery whereof he tried to ascribe to himself; then, I say, it was that he undertook in 1876 to explain them all by the atmospheric germs as he had “explained” them, in 1862, by spontaneous generation.

“He first evoked his experiment upon the blood in 1863, and, doubtless because Estor and I, after the discovery of the microzymas of the fibrin, had not thought it worth criticizing, he qualified it as *famous*(!), using it to deny even the existence of the microzymas. He then canvassed for approvers to maintain that uncooked milk, like the blood, is unalterable when preserved from contact with the natural air; that without

atmospheric germs there would be neither fermentation nor disease, because there would be neither ferments nor microbes; for Pasteur, in spite of the inaccuracy of the etymology, had adopted this word with which to designate the micro-organisms.

“In short, Pasteur, who understood what he was about in this matter, ended by causing belief that things were as he wished they were, which as he himself has said, “is the greatest derangement of the mind.”

“The strangest part of the business is that it was believed, and that he was able to make the Academies his accomplices.

“It is true that he had at the same time organized the conspiracy of silence around the works related to the microzymian theory — so thoroughly, that one day, after a discussion during which I had attacked the principles of the microbial doctrines and had defended the microzymian theory, Cornil maintained that the discoveries of Pasteur had been verified in every country and that I was alone against all the world; to which I replied:

““It is not because everybody thinks so that it is true. I have demonstrated in an already old communication that the protoplasmic system, false in its principles, is false also in its consequences. It is so likewise with the microbial doctrines. For the dignity of science and of human reason it is time that they were abandoned!””

—Antoine Béchamp, *The Blood and its Third Anatomical Element* By Antoine Béchamp, 1912, Translated by Montague R. Levenson, [WHALE Oct 2005] {http://www.whale.to/v/bechamp_b1.html}

Questioning the Universe Publishing (QUP) {Irucka Embry}: The cycles of life, some must be broken and some must be kept going: **Continuum of Violence By Irucka Embry**

[8]

“Like [Guenter] Enderlein, Gaston Naessens noted that a change in the body’s inner environment, as well as a weakened immune system, led to the pathological transformative cycle of somatids. This immune system impairment could be traced back to various types of trauma to the body. Forms of trauma included **radiation exposure, chemical pollution, accidents, shocks, and even depressed psychological states**. The idea that depression and blocked emotions created precancerous conditions in the tissues of the body was also voiced by Wilhelm Reich in his search for an explanation of how T-bacilli could somehow be associated with the production of cancer in the body under conditions of bioenergetic devitalization. Perhaps the T-bacillus Reich discovered was the same BX microbe [Royal R.] Rife had discovered as well as the bacillus form of the somatid noted by Naessens.”

–Richard Gerber, M.D., *Vibrational Medicine: The #1 Handbook of Subtle-Energy Therapies*, Third Edition, page 517, Bear & Company, 2001, ISBN# 978-1-879181-58-8

Dr Nerman notes the following symptoms associated with a traumatic occurrence:

- “Anxiety
- Inflammation
- Sexual dysfunction
- Fatigue
- Menstrual problems
- Uncontrolled anger
- Mood swings
- Back pain
- Memory problems
- Headaches
- Sinusitis
- Bloating
- TMJ (temporomandibular joint)
- Heart arrhythmias
- Shortness of breath
- Inability to focus
- Pelvic pain
- Chronic pain
- Migraines
- Depression
- Insomnia
- Vision problems
- Dizziness
- Neck pain
- Sciatica
- Immune dysfunction
- Weight gain
- Slow healing
- Tinnitus
- Chronic lung infections
- Constipation
- Acid reflux
- Hormonal imbalance
- Asthma”

–Maud Nerman, DO, CSPOMM, CA; *Healing Pain and Injury*, page 14, Bay Tree Publishing, 2013, ISBN# 978-0-9859399-0-8
